

In-Track & Off-Track
Anti-Trespass Panels

PRISMA
Modular Deterrent System

Railpro has developed a new and innovative modular deterrent system for use in-track and off-track. Available from **HIRD Rail Development (HRD)**, this new anti-trespass system is very easy to install by a two-man team.

Innovative modular system - panels are connected to each other

Staggered pyramid profile acts as a highly visible & physical deterrent

Track fastenings remain visible, ideal for maintenance & inspection

Installation is simple & quick without the need for heavy machinery

Complies with Network Rail manual handling requirements for a two-man lift - each panel only weighs 42 kg

Fully tested for quality & reliability over a 25-year life-cycle

The PRISMA modular deterrent system is an effective solution to the problem of undesired and unauthorised rail access by trespassers, vandals, cable thieves or people who have suicidal intentions. The panels pyramid structure presents a convincing obstacle with its staggered heights, making it very difficult to walk over.

Installation is simple. Panels slot together like pieces of a jigsaw puzzle and will form a complete matrix to cover any specified area, for in-track or off-track deployment. Weighing only 42kg means installations can be carried out by a two-man team without the need for lifting equipment, which is more labour-friendly as well as it is cost-effective. All panels are delivered with complete assembly kits and instructions.

The PRISMA panel offers several advantages:

- Sustainable solution, made from 100% recycled vehicle tyre rubber
- Environmentally friendly
- Available in one standard size (L) 1200 mm x (W) 570 mm
- Panels can be adapted to on-site conditions with hand tools
- Resistant to wind and weather, tested at temperatures from -40°C to +60°C
- Maintenance-free

For further information on the PRISMA modular deterrent system, please contact the HRD customer services team.
